

1

```
$(document).ready(function() {  
    var text = $('p:first').text();  
    $('p:last').text(text);  
});
```

2

```
$(document).ready(function() {  
    $('.level-2 li').css('background-color', 'red');  
});
```

3

```
$(document).ready(function() {  
    $('li.third-item').prev().css('background-color', 'blue');  
});
```

4

```
$(".turkey").after("<li class='mash potatoes'><em>Mash Potatoes</em></li>");  
$m = $(".turkey").detach();
```

Since there are multiple list containing turkey we would have to attach the Mash Potatoes list first  
And then detach and store the “turkey” list in a variable so that we can reattach it later on.
